P A P

Phillip Ankjær Pasqualato

PROFILE

I'm a builder driven by curiosity and a genuine care for making things that matter. My background spans early-stage company building, product development, and innovation programs across climate, health, and venture, giving me hands-on experience with what it actually takes to move from idea to real-world impact.

I work well at the intersection of commercial thinking, product, and strategy, and I bring a structured and analytical approach combined with a willingness to take responsibility and act. I don't wait for perfect conditions. I move with intention, learn in the process, and contribute where it counts.

I thrive in environments where collaboration and execution go hand in hand, where people challenge with kindness and care about substance over noise. I'm motivated by working on things that create real value for real people, and by being part of teams that move forward together with purpose.

EMPLOYMENT

Junior Business Developer
EasyGreen & Modstrøm · Part-time
April 2024 – Currently

As a junior business developer, I support product development while co-leading marketing, sales, and partner initiatives. I also use analytics to boost team performance and improve commercial efforts.

Founding Team Member
EasyGreen · Full-time
April 2022 – May 2023

EasyGreen was founded to become an active and impactful player in Denmark's green transition, with a clear mission to contribute to the Climate Act's goal of 70% CO_2 reduction by 2030.

I was one of the first employees, which gave me broad responsibility across business development, recruitment, sales, and service, and the chance to shape both the culture and the digital product from day one.

After 13 intense months, we had built a healthy business with real value for customers. In May 2023, EasyGreen was acquired by Modstrøm, a Waterland-owned energy company, following a successful exit by Medley.VC.

Business Development Representative
Alm. Brand · Full-time
Sep. 2021 – April 2022

As a Business Development Representative, I was responsible for creating a steady flow of qualified leads for the sales team. This involved outreach to potential customers and booking meetings that supported successful sales outcomes.

EDUCATION

Bachelor of Science in Engineering (BSc Eng), Sustainable Design
Sep 2024 – Currently
Focus on sustainable product development, life-cycle analysis, user-centred design, and interdisciplinary problem-solving combining technology, environment, and society.
